

ATR environmental targets and objectives 2007 – 2010

In continuation of its environmental commitments and the implementation of its Environmental Management System, the ATR activities affecting the environment are:

- ✓ Tertiary activities
- ✓ Personnel and site services
- ✓ Our aircraft production activities
- ✓ Training activities intended for customer airlines.

Within the perspective of continuous improvement targeted at controlling and reducing the impacts on the environment generated by all our activities, an environmental program, driven by our management will enable our Centers at Blagnac and St Martin to reach the following environmental objectives:

1 – Improve waste sorting and management:

- 1- A. 80% of Non Dangerous Waste sorted
- 1- B. 70% of Non Dangerous Waste recovered for raw materials or energy
- 1- C. 100% of Dangerous Waste processed by the authorized organizations

2 – Control consumption of raw materials:

- 2- A. 5% reduction in paper consumption at equivalent production level and payroll.
- 2- B. 5% reduction in Blagnac site electricity consumption
- 2- C. 100% of chemical products managed in compliance with regulations (Management of stock and consumption, labeling of containers, Safety data sheets ...)

3 – Control pollution:

- 3- A. Set up a Company Travel Plan
- 3- B. Prevent all ground and water pollution
- 3- C. Prevent all air pollution

4 – Reach regulatory compliance for our Blagnac and St Martin sites.

To achieve this, an environmental organization has been set up to reach the objectives and targets within the framework of obtaining ISO 14001 certification.

The commitment of all, ATR, sub-contractors and partners, is necessary.
